

360View for BusinessObjects Enterprise XI (R2 and 3.x): a powerful and intuitive web-based tool for implementing, managing and documenting your XI security without the CMC.

Implement and manage your security using dynamic matrices:

	Everyone	Finance	Marketing	EU	US	Sales	
Root Folder	NA	(NA)	(NA)	(NA)	(NA)	(NA)	
Financial (...)	(NA)	VIEW-REFRESH	(NA)	(NA)	(NA)	(NA)	
Marketing (...)	(NA)	(NA)	VOD	(VOD)	(VOD)	(NA)	
Manager (...)	(NA)	(NA)	VIEW-REFRESH	(A)	(A)	(NA)	
Marketing US (...)	(NA)	(NA)	(VOD)	(VOD)	(VOD)	(NA)	
Sales (...)	NA	NA	(NA)	(NA)	(NA)	MY-PROFILE	

**Save time managing your XI security
Spend more time on Business Intelligence**

- Manage and use your own access levels even for XIR2.
- Define users and groups in Excel and import them into the CMS using 360View.
- Manage and document universe overloads.
- Identify dormant user accounts, purge inboxes and delete user sessions.
- Have a 360-degree accurate view of deployed security: user centric and object centric vision.

Rights Update

Group : Administrators
Folder : Universes

Predefined Access Level :
Full Control

Your Profiles :
VIEW-REFRESH

**Document and control all your security
Be SOX compliant**

Implement and manage your groups, users, folders, objects, universes within a hierarchical perspective.

Audit and document your deployed security: export to Excel. Schedule those Excel exports to emails or disk.

Add additional custom fields to users and objects.

Complete visualization of the security applied on sensitive data or within SOX or BASEL environments for administrators and key users.

Groups and Users Management

Why choose 360View?

It provides a simple graphical interface for daily management of complex BO XI deployments and enables you to see the 'Big Picture' for your security configuration.

Try our trial version and see how simple it is to manage your BO XI security using 360View in your own environment.

If you missed the old Supervisor, we brought back its most useful features.

Replace the CMC and the Import Wizard.

360View is designed for administrators, local admins, key users and auditors.

Manage and compare multiple environments at once

360View+ for BusinessObjects Enterprise XI (R2 and 3.x) allows you to compare CMS between environments: Make sure the content and the security settings are similar between your multiple environments. Document differences, avoid side effects.

- Manage all your repositories in a single screen.
- Compare folders, groups and security between CMS.
- Get an overview of the differences detected. Document them within Excel.
- Drag and drop objects and actors between CMS. Replace the Import Wizard.

Customer testimony

Swiss Re

"Thanks to 360View we are now able to deploy security settings consistently among our numerous BusinessObjects Enterprise Environments by using the centrally stored Custom Security Profiles. At the same time the Excel export functionality helps us to satisfy all internal security audit requirements - with remarkably fewer efforts needed compared to a manual and a documentation procedure prone to error."

Urs Aeschbacher, Director, Head of Information Exploitation Platform, Global IT - **Swiss Re**

"360View allows us to easily manage our Business Objects Enterprise XIr3 (BOE) environment. We recently redesigned our BOE security strategy in its entirety and relied on 360View to significantly reduce the complexity and effort required for such an initiative. 360View user-friendly interface and comprehensive audit reports considerably reduce the amount of time our support team spends on deploying and managing extensive administrative changes. Even day-to-day, development team members use 360View to keep track of user activity and monitor adherence to publishing standards."

Tanya Bressi, Director, Business Intelligence - **UQAM**
