

Schedule BO reports with Control-M, Visual Tom or Dollar Universe

- Schedule BO reports using your Enterprise Job Scheduler.
- BO scheduling is integrated with any other scheduling jobs like ETL jobs.
- Easily link your datawarehouse loading and your BO scheduling.

Create your destination lists within Excel or using a SQL script

- Create your dynamic lists from an Excel spreadsheet or a SQL query: specify the destination (Email, server, Inbox...) the format (XLS, PDF ...).
- For each line specify different values to fill in dynamically prompts.
- Non intrusive and web based solution. You don't need any server or any repository.

Schedule reports based on the destination lists

- Schedule BO reports based on those destination lists.
- 360cast will create as many instances as many lines present within the Excel spreadsheet or the SQL query.
- Each instances will correspond to the prompts and the format as specified within the Excel spreadsheet or the SQL query.
- Dynamically change the instances as soon as you change the Excel destination list or the SQL query (the data within the database).

360cast™ Dynamically schedule Business Objects reports

Broadcast your BOE documents based on Excel

360cast for Business Objects XIR2, XI3 and BI4: A powerful and user-friendly web-based tool to schedule your BO reports based on dynamic data using Enterprise Job Scheduler.

Why choose 360cast like almost 200 customers around the world?
